

Orient Adds New Models with Fresh Gradation Dial Colours to the Orient Mako 40 Series

Orient has introduced five new Orient Mako 40* models to its iconic diver design series. With a compact 39.9 mm case and gradation dials in modern colours, these pieces combine sporty and casual styling making them an ideal everyday companion as well as a fashionable accompaniment for any style.

*Not an ISO standard diver's watch.

Orient's diver design models have represented everything that the brand stands for since their launch in the 1960s. Continuing this design lineage, the model affectionately known as Orient Mako has become popular not only for its superior practicality – including water resistance to 20 bar and scratch-resistant sapphire crystal glass for safe use by the water or outdoors, and in-house automatic movement offering stable high accuracy – but also for its refined designs that make the watch suitable for any occasion from business to outdoor leisure.

Orient Mako 40 is characterised by a compact 39.9 mm case, as well as the case design omitting the crown guard, a uni-directional rotating bezel highlighting the solid texture of the stainless steel, and a subtle date display. The latest models combine these light, simple style elements of Orient Mako 40 with a refreshing design that highlights the dial.

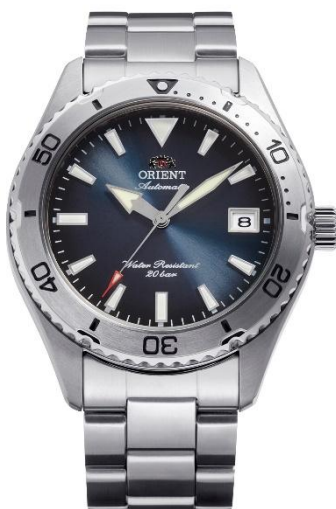

The new dials feature a sunburst finish that creates subtle shifts in colour depending on the angle of light and come in five modern colours emphasising the watch's metallic texture: green, navy-blue and brown dials for the regular models, and stylish grey and warm copper dials for the 2026 Spring-Summer models. All dials feature a circular gradation that transitions from light in the centre to dark on the outer edges, creating a sense of depth.

In addition to the fresh new colours, the dial's details are also distinctive, including the adoption of the same indices design as Orient Mako's bar indices, a bold arrow-shaped hour hand, and a diamond-shaped minute hand with an elongated tip that reaches the minute scale. The bar indices and hands enhance the sleek, bold diver design, while the high luminosity of Luminous Light allows the time to be read even in the dark.

The new Orient Mako 40 models combine refined designs with practical functions that offer comfortable use in everyday situations. The models come with a screw caseback and screw-down crown ensuring water resistance to 20 bar, robust metal bracelet made of high-quality stainless steel (SUS316L), automatic (with hand winding) bi-directional winding movement allowing the watch to be fully wound in a short amount of time, and in-house calibre F6722 offering stable accuracy of +25 seconds to –15 seconds per day.
