

The United Nations launched the 17 Sustainable Developments Goals (SDGs) in 2015 as a plan of action for our people, planet, and future prosperity.

Epson is fully committed to the SDGs. We will contribute to the achievement of a more sustainable future as envisioned by the SDGs by using our efficient, compact, and precision technologies and digital technology. All our operations and activities are aligned to the goals. They are integrated into our mid and long-term plans. The SDGs are the compass for our business and our sustainability actions. Both as businesspeople and as individuals, we need to show that we are accountable and transparent. We are committed to ethical leadership and good governance through value-based strategies and positive actions for a sustainable business.

More specifically, we will:

- Assess our activities regarding the SDGs and identify the goals that we can contribute to
- Actively engage with our stakeholders regarding the SDGs
- Define, implement, and monitor suitable strategies, objectives, and actions to support the relevant SDGs
- Evaluate our actions and publish an annual progress report
- Strive for continuous improvement of our operations, processes, and our SDG management system
- Comply with the requirements of the SDG standard and align our Sustainability Management System with the SDGs
- Conduct our business activities lawfully and in a manner that is consistent with our compliance obligations
