

Add colour to your black and white labels in five easy steps without changing your programme language

Epson's colour printing is the simple and easy way to enhance your ZPLII label templates.

Print and colourise black and white ZPL templates for labels by adding special features to our ColorWorks ESC/Label code. Combine colour images in the ZPL code, without having to change the label instructions, then dynamically print colour images using the ZPL architecture.

For C#, .Net and Java developers, use the ColorWorks ESC/Label image registration and printing commands to develop specific colour printing applications within a ZPL framework.

Follow these five steps to add colour images to a ZPL data stream:

1 Set the PNG image to the correct size and resolution.

2 Start the Printer Setting utility from the Windows Start menu and configure the printer to the correct ZPL print resolution.

3 Use Labelary.com to set up a ZPL shell*.

4 Use Hex Editor Neo to insert the PNG binary Hex image data to the ZPL data shell.

5 Once the ZPL and binary image data are merged, it's time to print the prn file.

Colourisation of ZPLII black and white templates available in these printers

C7500 series

C6000 series

C4000 series

Print eye-catching labels with Epson colour and ZPLII.
