FAST

Create and print your labels in seconds

Print speeds of up to 35mm/sec[1] at a resolution of 360dpi with full or half automatic cut function.

Save time with drop-stop functionality

Thanks to the unique drop-stop function built in to the LW-Z900FK, labels do not fall once printed — even when using the automatic full or half cutter — so no time is wasted searching for dropped labels in the work area.

Work smarter and faster with Pick and Print

Print the next label in a pre-set series as soon as the LW-Z900FK detects you have 'picked' the previous label.

Benefit from hands-free capability that means you don't have to stop working

If you're working in a confined space or carrying out more complex tasks requiring both hands, simply affix the unit to any metallic surface for hands free use and maximum convenience.

EFFICIENT

Enjoy flexibility whenever and wherever you need it

The LW-Z900FK utilises continuous tape lengths of up to 9m and up to seven different tape widths from 4mm–36mm[2]. Three die-cut label shapes are also available.

Minimise your waste and maximise your efficiency

Reduce front and back label margins to just 1mm to cut down on tape waste and save money.

PRODUCTIVE

Quickly access stored labels from the large memory

Store up to 100 label patterns in the LW-Z900FK's memory with easy-to-use hot keys for shortened data entry input time.

Print the labels you need, when you need them

Enhanced versatility for on the job printing, such as die-cut, magnetic and heat shrink (HST) tapes with a range of capabilities for virtually any print requirement.

RELIABLE

Work safe thanks to a rugged design that simply won't let you down

The ruggedly designed LW-Z900FK is fully compliant to MIL-STD 810F[3], protected with a hard carry case, carry handle and thanks to magnetic attachments can be used hands-free. Reassurance of a three year warranty as standard.

Keep going for as long as you need it with a long life Li-ion battery

Print up to 8 tapes on a single charge[4] with AC adaptor 220/240V included as part of bundled accessories which helps keep total cost of ownership low. Additional Li-ion battery is available as an option.

For mechanical, electrical, network, plumbing equipment, building control and factory automation installation, as well as maintenance, repair, overhaul and renovation services the LW-Z900FK can be relied on to quickly and efficiently print a wide range of tapes and label sizes.

As a result, installations and maintenance tasks can be completed easily and quickly, delivering both a more productive workforce and more satisfied clients.

EPSON®

EXCEED YOUR VISION

The LabelWorks LW-Z900FK industrial label maker is designed to keep you operating smoothly, efficiently and productively.

The LW-Z900FK has been engineered to help installers and maintenance workers complete labelling tasks quickly and easily. Lightweight, compact and portable, it features a rugged design and protective hard case which prevents damage from drops of 1.2m.

Thanks to the fastest print speeds on the market and with unique built-in Epson designed technology, such as Pick and Print, Drop-Stop and Mix-length functionality, the LW-Z900FK can boost efficiency and productivity of every worker in any industrial environment. A handle ensures the unit can be easily attached to a tool belt or storage hook for greater on-the-job portability, or simply attach magnets to the back of the unit for hands-free use.

TECHNOLOGY DESIGNED FOR EFFICIENCY

Exclusive Drop-Stop — once the label is printed it remains connected to the label maker, rather than falling to the floor, and remains there until you need it.

Unique Pick and Print — when one label is printed and picked off, another label is printed immediately.

Mixed length labels — use up to 50 different label lengths in one print run which can all be printed within a single job.

Automatic cutter — can be set for full or half cut labels, both with back split tapes allowing swift, easy unpeeling before sticking. Much less effort compared to a manual cutter!

CONVENIENT AND TIME-SAVING FEATURES

Tape recognition — by displaying automatic templates when required, errors are minimised and efficiency and productivity improved.

Hot keys — shorten data entry time with easy-to-use dedicated template direct access keys for general ID labelling, punch block labels, patch panel/block-66 labels, mix-length label strips, cable flags and self-lamination overwraps.

Epson label editor — allows users to easily use more advanced labelling functions as well as download label designs from a PC direct to the unit.

Hands-free use — simply attach magnets to the back of the unit and position it conveniently around your workspace for hands-free use.
