

EB-L25000U

The brightest 3LCD laser projector in the world¹

At 25,000 lumens, Epson has produced the brightest 3LCD laser projector currently available anywhere in the world¹.

Based on a perfect combination of Epson 3LCD technology and a laser-phosphor light engine, the EB-L25000U supports a wide range of high-quality 4K compatible projection lenses.

The internal optics are sealed to prevent dust, theatre smoke and other airborne contaminants from entering the projector. This makes it ideal for use in live performances, plus other demanding applications in rental, staging and events.

High definition

- High brightness - 25,000lm
- WUXGA
- 4K quality lens
- 4K image enhancement

High reliability

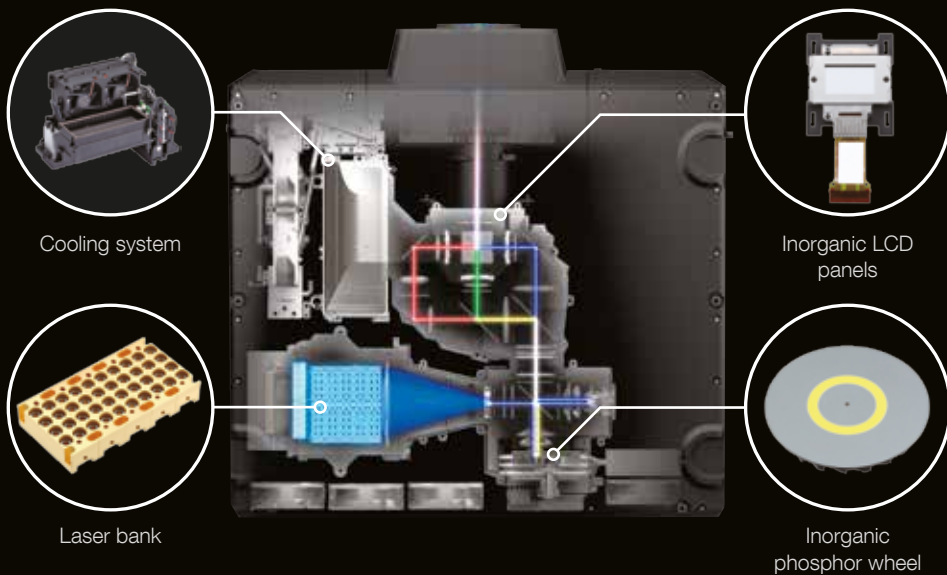

- Sealed optics
- 20,000 hours maintenance free laser light source
- Inorganic panels and inorganic phosphor wheel

Installation flexibility

- 360° operation and portrait mode
- Compact size
- Wide lens shift (V:±65% / H:±30%)²
- Full lens line-up with eight options

EPSON[®]
EXCEED YOUR VISION

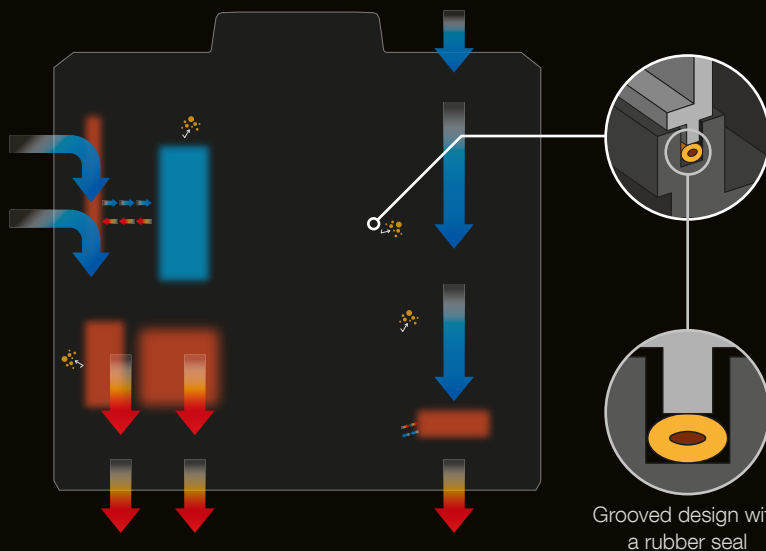

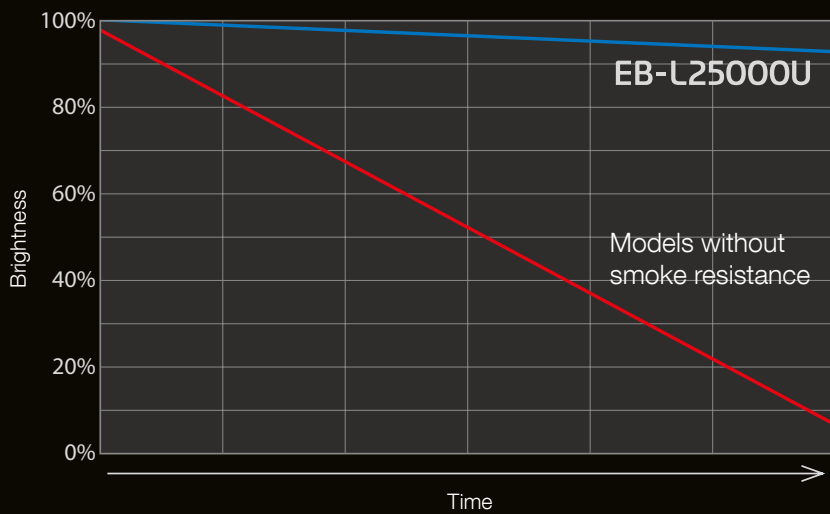

The sealed optical structure protects the inorganic LCD panels and phosphor wheel from external contamination. This is critical when operating in harsh environments, which often contain high levels of artificial fog or dust.

The sealed optical structure protects the inorganic LCD panels and phosphor wheel, which suppresses brightness deterioration over time. This makes the EB-L25000U far more suitable for use in adverse conditions, such as those containing high levels of dust or theatre fog.

A combination of air and liquid cooling is used to effectively cool the optical components, allowing us to achieve 25,000lm in a compact size. Dust contamination is prevented by the tongue and groove seams on the closed optics structure. Furthermore, a rubber seal along the seam enhances the sealing.

Dust resistance test results (in-house testing)

¹Brightest 3LCD projector as of April 2016. ²Some lens exceptions. ³Survey conducted by Futuresource Consulting Limited for the period from 2001 to 2015.
