

The choice is clear

When choosing the right display solution for your business, you'll soon discover Epson projectors hold many advantages over flat panels. So many, in fact, that there's really only one clear winner.

Flat panels aren't easy on the eye

Flat panels can appear pixelated when you view them close-up for long periods, causing tired eyes. Epson projectors are less pixelated and some feature automatic light adjustment¹, making for a comfortable experience.

Flat panels restrict your viewing

Unlike flat panels, Epson projectors have no blind spots or restricted viewing angles, making it easier to see content even from the sides of a room. They're also free from glare, reflections and fingerprints.

Flat panels offer one fixed size

With Epson projectors, you have the flexibility to scale a display up to 500", in multiple aspect ratios. You can also connect multiple projectors to create one large seamless display.

Flat panels aren't environmentally responsible

Unlike flat panels, Epson business projectors are TCO Certified², meeting the world's most comprehensive sustainability certification for IT products. To achieve that, we set the highest standards in our supply chains and factories, and offer environmentally responsible take-back and recycling schemes.

Flat panels aren't portable

With most of our projectors, you aren't restricted to one room, one venue, one setting. They're lightweight, portable and easy to set up.

Flat panels don't suit every audience

Thanks to scalability and flexibility, Epson projectors suit rooms and audiences of every size. Their ability to deliver large-scale, data-heavy content makes it more comfortable and engaging for the audience to view.

Flat panels cost more to install

Flat panels are heavy, require strong walls and a lot more physical exertion to install. Connecting Epson projectors to your business couldn't be easier. Simple to install, they're also fully compatible with most industry-standard image software and collaboration tools.

Enterprise security with peace of mind

Thanks to Epson enterprise security, our projectors operate in a network that can't be accessed wirelessly without a password. Also, any saved data and annotations made on our interactive displays can be encrypted and password protected.
