

The true potential of hybrid working

Combine physical space, technological hardware and collaboration platforms for the ultimate participant experience in hybrid working environments.

Hybrid working is here to stay, making it more important than ever to balance the needs of remote participants and in-person attendees when designing a meeting space. The experience should be engaging, interactive and immersive for everyone, as if they were all in the same room.

Recent developments in video conferencing platforms can facilitate this by allowing remote workers to be 'projected' into the room at eye level and in lifelike size.

This makes the ability to display imagery and video at the most appropriate size for each meeting space crucial.

Epson technology is helping to meet this growing challenge, offering new ways to achieve the optimal hybrid environment. That includes:

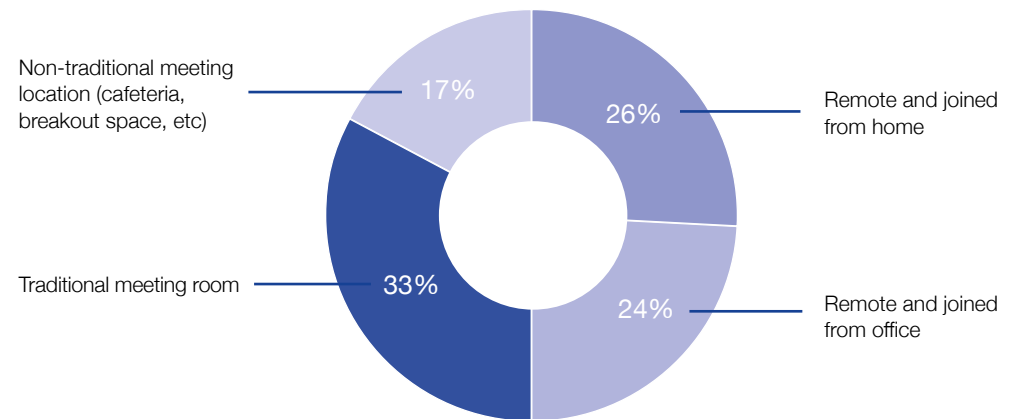

Offering a comprehensive line-up of meeting room display solutions featuring the latest laser light-source technology, combined with crisp, high-resolution image quality, at brightnesses suitable for any office, meeting room or boardroom environment.

Providing the right-sized display for the type of room and number of attendees, to ensure every projected detail is visible to all participants, rather than sitting around a laptop or flat-panel display.

Entire walls becoming a projected image to create a truly immersive experience that isn't possible with a flat panel, and too expensive with an LED wall display.

Meeting attendance by location

EPSON[®]
EXCEED YOUR VISION

The hybrid boardroom

Home to the strategic decision-making meetings within a business, the modern boardroom must give all participants equal representation and equal access to content being discussed and debated. As the showpiece meeting room, it has to have a private, personal and prestigious feel – all of which can be achieved with Epson projection technology.

Eye-level interaction

This example of an all-in-one display and video conferencing solution is capable of producing immersive video and audio at eye-level, simulating a face-to-face meeting experience and ensuring equal participation of all attendees.

Large format imagery in high resolution

Create an inclusive, executive experience for all of your meeting's participants with a ceiling- or credenza-mounted Epson projector with Ultra-Short Throw lens. With the flexibility to project in various aspect ratios, and to adapt the display size based on the room set up, Epson's projectors can provide a high-brightness, high-resolution and large-format display for the ultimate immersive meeting experience.

Recommended products:

EB-PU1008W – 8,500 lumens, WUXGA resolution with 4K Enhancement and HDR

ELPLX01WS – Ultra-Short Throw lens

ELPSP02 – 2x 15W active stereo speakers

Projector and lens are also available in black
