# BUILT FOR DYNAMIC INTERACTIVE MEETINGS

**EPSON**
EXCEED YOUR VISION

# BUILT FOR COLLABORATION

## Deliver dynamic productive meetings

Participants will be transformed from passive listeners to attentive, engaged contributors by allowing them to share and demonstrate ideas.

- Create a unified user experience by digitally capturing notes, ideas and information for seamless collaboration. Content can be captured from external sources via a scanner or imported from files stored on a network location or USB drive.

- Instantly save and distribute information to all team members - no need to write meeting notes!

## Enjoy the freedom

No longer bound to controlling presentations from the front of the room, simply link your smart device through the iProjection app*2, and present while moving around engaging with your audience. The free app enables participants with their own device to display and share content from a variety of iOS and Android smart devices via a Wi-Fi connection.

## Experience easy and intuitive operation

Designed with users in mind. This complete interactive solution offers simplified and intuitive touch control – even for less technically experienced presenters, making meetings more engaging, productive and efficient.

- No software to install and no application to configure. Simply switch to PC free, standalone whiteboard mode, start writing or capture content from external sources and digitally annotate the shared ideas.

- Navigate, edit or create documents using either finger-touch*1 or interactive pens.

# OPTIMISED FOR PRODUCTIVITY

The Epson EB-1400Wi Series provides a solution which is completely unique in the market. Combining the role of a large screen display (up to 100 inches), an interactive whiteboard, a paper flipchart and more into one versatile, interactive meeting room system. Intuitive to use, with no special training required, the EB-1400Wi Series is a cost effective solution, eliminating the need for multiple pieces of equipment in each meeting room. It encourages collaboration, increases productivity and supports the growing implementation of unified communications and BYOD (bring your own device) strategies in the workplace.

## Finger-touch[*1] and dual pen interactivity

Use either finger-touch[*1] or dual pen interactivity which support both gesture control and annotation. Each of the pens and finger-touch[*1] can be assigned their own individual attribute and work across the entire area of the screen.

## Split screen functionality

View two individual sources side-by-side on the same screen (e.g. video input from a video conference and PowerPoint slides from a PC) to enable you to compare and discuss information from different sources at the same time.

## Multi location capabilities

Share, collaborate and annotate during meetings that are held in different locations anywhere in the world, whilst viewing common information. Connect to up to 3 other EB-1400Wi Series projectors across a network.

## PC-free / standalone whiteboard mode

Create, add and delete up to 50 pages of whiteboard content. Objects on the whiteboard can be resized, moved around and rotated using finger-touch[*1] gesture control, while text and other annotations can be added using either finger-touch[*1] or the interactive pens.

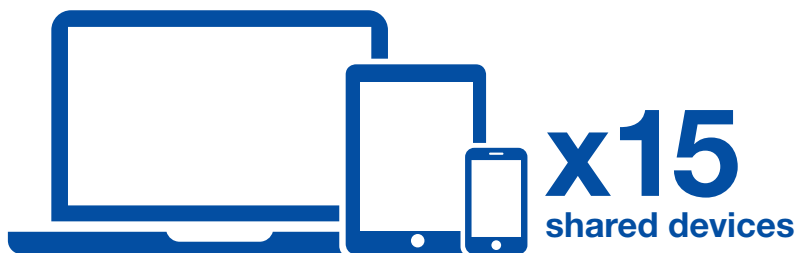

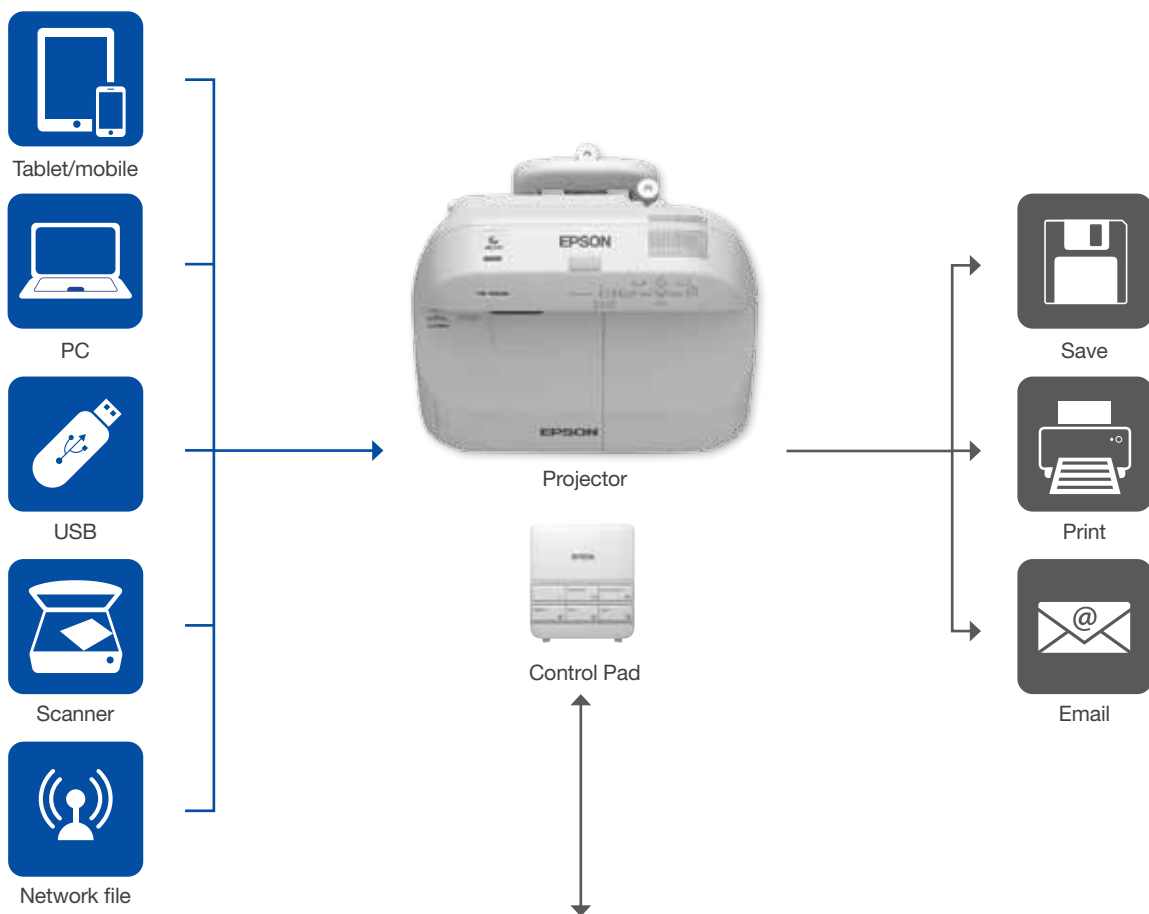

## Whiteboard sharing mode

Allow participants to view and annotate the whiteboard content directly from up to 15 individual laptops or tablet devices via a web browser, and save directly onto your own device without any special software or app.

# SMOOTH DIGITAL WORKFLOW

With the Epson EB-1400Wi Series, information flows clearly and smoothly from screen to viewers, who can then discuss and develop ideas using the interactive features. Results can then be saved via USB, emailed or printed.
